

PESTICIDE & HERBICIDE RESIDUE ANALYSIS

EXTENDED PROFILE**

The **OMIC USA Extended Pesticide Profile** offers a combination of organophosphates, organochlorines, pyrethroids, carbamates and organonitrogen pesticides, including pesticides, both past and present, that are most commonly used worldwide. Utilizing Triple Quad Mass Spectrometry in conjunction with QuEChERS extraction procedure, we are offering a screen of 476 pesticides. The majority of the compounds have a 10 ppb Limit of Quantification (LOQ), where the LOQ is defined as ten times Signal to Noise (detection limit may be influenced by sample type). Some analytes may be excluded from the screen due to specific matrix interferences.
